Introducing **AirFX Fire Rated Pair Coil**, a pre-insulated pair coil solution designed for commercial applications. Featuring 13, 19 & 21mm fire-retardant insulation, this range of paircoils has been compliance tested according to AS/NZS 1530.3:1999 and AS/NZS 1571:2020.

Features

- › AS/NZS 1571 compliant
- › Applicable to R410A & R32 Refrigerants
- › New Figure 8 insulation design, no messy glue, insulation easily separated by knife or scissors
- › 19 & 21mm insulation for minimum R1.0 thermal performance compliant to AS/NZS 4859.1

3-Zero Fire Rated

AirFX Paircoil is truly fire-rated with a 3-Zero score when tested to AS/NZS 1530.3:1999 with a Smoke Developed Index of 1.

Superior Thermal Performance

Nitrile-Rubber foam offers superior thermal performance at more than R1.4 for our 1/4" coil in 21mm*.

Australian Compliant Copper Tube

Boasting over 99.9% pure copper for unmatched durability, AirFX copper is fully compliant to AS/NZS 1571 standards.

Heavy Duty Pair Coil

AirFX Heavy Duty (HD) Pair Coil is an easy-to-install piping solution for domestic use available in 9mm & 13mm insulation. It is suitable for use with refrigerants R410A and R32 and is both tested and certified UVC Resistant.

Features

- › Fully Compliant and tested to AS/NZ 1571:2020
- › Tested and Certified UVC resistant
- › Operating range -40°C to 120°C
- › Where 3 Zero fire compliance is not required, the 13mm insulation version provides higher R ratings compared to the same size 13mm Fire Rated Pair Coil.

Standard Pair Coil

Typical pair coil has a raised "diamond" texture which is frictionous against rough surfaces such as brick and framing timber, resulting in tears when pulling through tight spaces.

Header Pack

Daikin Header Pack

The Daikin Header Pack is a light weight, compact, centralised copper pipe header for connection to VRV/RA indoor units in VRV Heat Pump type systems (VRV H, VRV S etc.). Hard drawn / pair coil copper is connected upstream of the header pack while downstream connections utilise flared copper pair coil* serving up to six indoor units. This intelligent design allows for neater installation layouts, no downstream brazing for reduced labour cost and quicker installation.

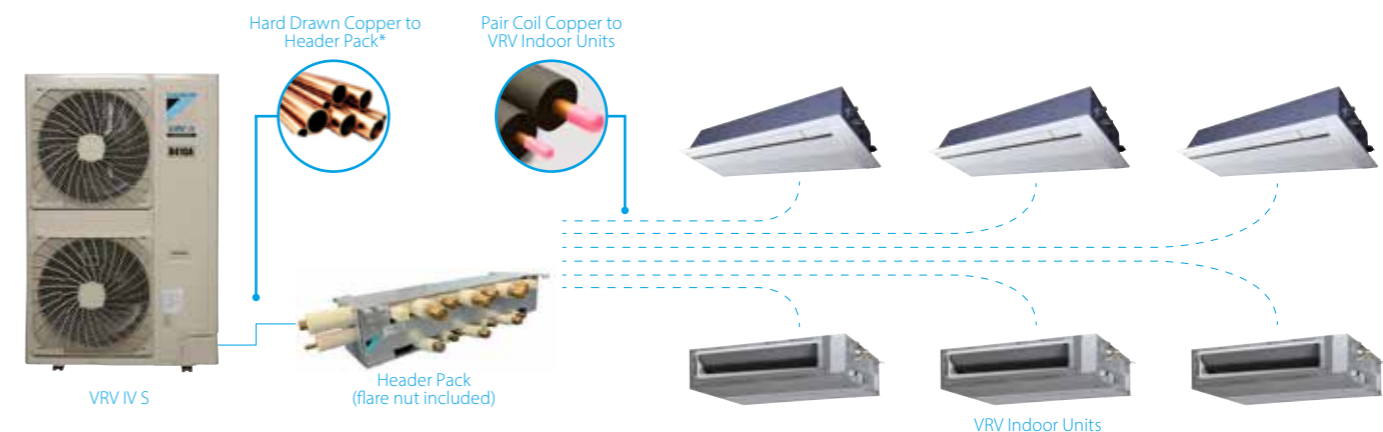

Five header pack sizes are available with connectivity of up to 6 indoor units at 420 total indoor unit capacity index.

*Fire rated pair coil required on applications apart from Class 1 Buildings
[^]Body dimensions, does not include the extruding copper pipes

Connection Example

*Pair Coil to Header Pack can be used when using BHF6(A)RHP6Z

Notes:

1. For larger capacity VRV outdoor units, more than one Header Pack can be utilised in a system
2. Header Pack is not compatible with indoor units that have >Ø15.9mm pipe size
3. Reducing flare nut can be utilised for connecting to a smaller pipe size i.e. Ø15.9→12.7mm
4. Max piping length between header pack & indoor unit is 40m, all other piping rules must follow as per the VRV outdoor unit
5. Refnets must not be placed downstream of header pack
6. Branch provider units are connectable downstream of header pack
7. Daikin VRVXpress software supports header pack selection, please use this software to ensure correct system creation

Aspen Pumps Portable Lifter

The CM439 portable lifter helps save time and effort by turning a three person lifting job into a single person job. The fully adjustable legs are designed for maximum stability on uneven surfaces, while storing efficiently in a compact form factor. With a maximum capacity of 130kg and a lift height of 4.27 metres, the CM439 is ideal for domestic and commercial operators. Sets up in minutes and can be powered by mains electricity, hand crank (supplied) or a power drill using a 17mm socket

Ivory Plastic Trunking

Pacific Duct Plastic Trunking

Pacific Duct joiners are made from ASA resin, while the straight trunking is a unique co-extrusion of PVC and ASA. This ensures consistent colour between the trunk and joiners over time and offers high UV resistance.

Note: Sizing is measured internally.

Aspen Condensate Pumps

Selecting the right Aspen Pump

Where is the pump going to be installed?

Hi Wall Split A/C

In the ceiling – **mini/maxi orange**

Behind the indoor unit – **mini aqua**

Under the indoor unit – **mini blanc**

In pipe duct with pipe – **mini/maxi lime**

Ducted A/C

In the ceiling - MAX Hi Flow / Mini Tank / Hi Lift Tank

What size is the air conditioner in kW?

For every kW of cooling an air conditioner can produce 1-1.5L of condensate per hour (LPH)

Example (using 1LPH): 5kW unit = 5LPH

*Please note: Condensate output can vary greatly depending on environmental conditions like humidity. Please check local conditions and use 1.5+ LPH if required.

How far must the pump lift the water?

A = vertical distance from condensate tray to inlet of pump

B = vertical distance from pump outlet

A + B = Meters of head

Example:

- > A/C unit is 5kW cooling capacity
- > Pump is located 1M above the indoor unit (suction lift)
- > Water needs to be pumped 3M vertically from pump
- > We need a pump that will pump 5L/hr at 4M head

Convenient and easy

The loose biscuit design conveniently turns the diffuser to a multi directional outlet, able to provide airflow in a variety of Airflow Patterns. The blades in each biscuit can be adjusted to allow for more targeted throw of airflow. A new locking gate design gives a superior fit while being easy to install and able to take on higher loads without sagging for your peace of mind.

Airflow Patterns

The polymer reducing neck features a butterfly damper at the rear to provide greater airflow control.

The reducing neck snap fit feature and side tabs for connecting the duct makes fitting convenient and easy.

Multi direction airflow adjustment
Each horizontal and vertical blade can be adjusted individually which gives better control of the airflow.

Dual purpose
The blades can also function as a damper to limit the volume of airflow.

Easy and convenient
The removable core can be easily pulled out and snapped back in.

Insulated Poly Combination Fittings

Solid Construction

RapidFlow Australian made polyethylene combination fittings are made using rotational molding to achieve an exceptionally strong outer shell that resists deformation under high heat, pressure or when tightly taped.

Fully Insulated

The internal insulation is formed simultaneously as one piece with the shell covering 100% of the body and spigots. All Rapidflow insulated fittings are tested to achieve a minimum R0.4 rating.

Clever Design

The stepped spigots feature a ribbed surface that works as a duct grab for secure fitting of both duct and reducers.

Versatile & Easy To Work With

The spigots cut down easily using a saw or knife. From the range of 30 models, 167 combinations are possible before adding any reducers.

Insulation layer

Available nationally in R1, R1.5 and R2.0 ratings. Fully tested and certified to AS/NZS 4859.1 For maximum efficiency. Test certificates available on request.

4 Zero aluminium core option available

AirFX duct is also available with a 4 Zero aluminium core. 4 Zero cores are inherently stronger enabling duct to be pulled and secured in difficult spaces. Under extreme heat fluctuations (eg tropical regions) 4 zero cores are more durable in the long term. Ask your Daikin Trade centre or account manager for more details and availability in your area.

Motorised Zone Damper

Product Info	
Type	Motorised zone damper
Function	Airflow control
Mount	Connect with duct
Options	24V yellow housing
	240V red housing
Material	Galvanised sheet metal
	Casing and blades
Sheet Metal Gauge	Thickness 0.5mm
Design	3.5NM torque
	Sealed joints (No rivets, no spot welds)
	Insulated casing
	Extra blade support
	Port connection integrated into board (24V)
	Dual earth cable option (240V)

Integrated port connection

The port connection is directly embedded in the circuit board. The elimination of wires reduces the chance of product malfunction.

No air leakages

The precise production process forms sealed joints and eliminates air leakages.

Insulated case

Air flowing through the damper is protected by 5mm insulation.

Extra blade support

The added horizontal support increases the strength of the damper blade.

Dual Earth Wire Option

The earth wire could be either connected to a 4 core or via the external wire extruding from the housing.

Residual Current Circuit Breaker With Overcurrent Protection (Rcbo)

Product info	
Type	NHP MOD6 series - RCBO
Function	Residual current + overcurrent protection
Mount	DIN rail
Sensitivity Type	A
Short Circuit Rating	6kA
Compliance	AS/NZS 61009.1
Application	Domestic and commercial installation
Design	Double screw compact design combines with insulated busbar comb for easy installation

Miniature Circuit Breaker (MCB)

Product info	
Type	NHP MOD6 Series - MCB
Function	Overload protection
Mount	DIN rail
Curve Type	C (Trip Time: 5-10 x I _n)
Short Circuit Rating	6kA
Compliance	AS/NZS 60898
Application	Domestic and commercial installation
Design	Features a sealable/lockable handle which is padlockable in 'Off' position. Compact form factor allows for easy installation in load centres and panelboards.

Airzone VAF Zoning System

The Airzone VAF Zoning System is a variable airflow zoning system compatible with Daikin's range of residential and commercial range of ducted indoor units. It offers superior comfort over traditional On/Off zoning by providing individual temperature control in each zone and improved energy savings via its intelligent fan speed control.

Each solution consists of Airzone touch controllers, 4-step linear dampers (12V) and a VAF control PCB with Daikin P1, P2 communication module*.

*A BRC1E63 (Nav Ease) will also be required for backup and servicing

Key Features

Touch Controllers

Featuring premium aesthetic design with intuitive touch screen interfaces for ease of use. Available in 3 models: Blueface, Think and Lite.

Individual Temperature Control

The 4-step linear dampers precisely regulate airflow into each zone ensuring optimal temperatures for all occupants in the house hold at anytime.

Q-Adapt Algorithm

The controller automatically selects the appropriate fan speed (L/M/H) depending on number of zones opened and their calling demand, resulting in reduced running costs.

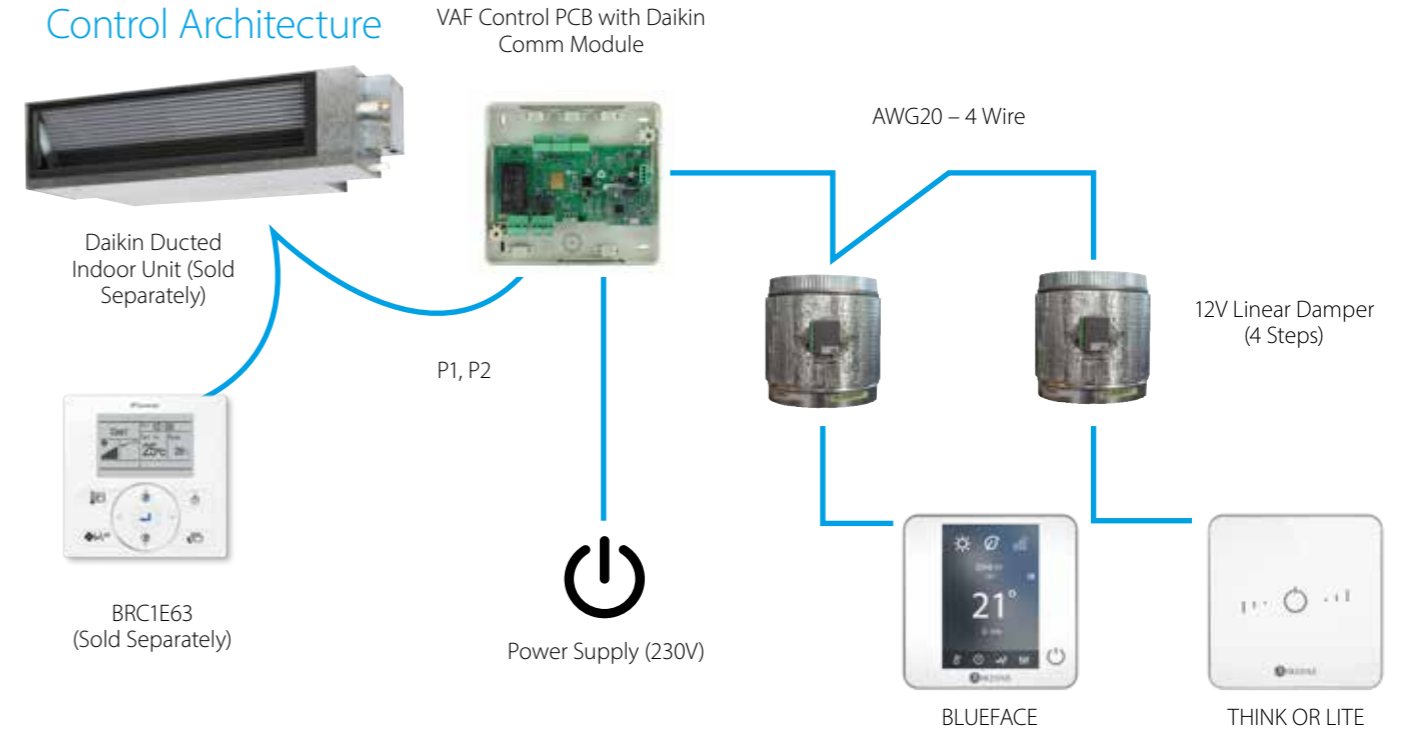

Scalable Design

Up to 10 zones can be controlled via a single VAF system and coupled with a simple control architecture this makes scalability and installation convenient.

Control Architecture

Notes

- Each VAF system requires at least one Blueface controller (main controller)
- Each zone requires one Airzone controller
- All Airzone controllers and dampers are powered by the VAF Control PCB
- If temperature sensing from the controller is not desired, a remote temperature sensor (AZVAF10KPROBE) can be utilised instead
- Additional 12V power supply (HDR-15-12) is required when more than 6 zones are connected
- All cables are field supply

Removable Core Linear Slot Diffuser

Suitable for both cooling and heating applications with normal temperature differentials to 12°C. Data is calculated from 1000mm long diffuser modules, installed in a 2.7m high flush ceiling and at isothermal conditions. Data given is based on air being diffused in one direction only. Diffusers can be set to diffuse in opposite directions, thus for 2-way air pattern divide the total air volume proportionally.

Round Diffusers

Data is based on Isothermal conditions with a room height of 2.7m with the diffuser mounted flush in an unobstructed ceiling. Throws are given at a terminal velocity of 0.25m/s. Data is tabulated with the centre cone in two test positions 20% and 100% open respectively. Noise Ratings are based on a room absorption level of 10db.

Removable Core Bar Grille

Throws are based at Isothermal conditions to a terminal velocity of 0.5m/s and 0.25m/s respectively for a 1 metre active length with a room height of 2.7m. The diffuser is mounted flush in a side wall no further than 400mm down from the ceiling. Throw values are for throws in one direction only. Noise Ratings are based on a room absorption level of 10db.

Removable Core Double Deflection Register

Throw values are based on Registers installed in the sidewall not more than 600mm below a flat ceiling. Terminal velocities are based on 0.25m/s. NC levels and pressure drops are given for registers with all blades set at a 0° pitch and with no dampers attached. For blades set at a 40° pitch a 50% increase in pressure can be applied.

For other performance or selection details please contact the supplier.

Selection Chart

Test Conditions
Throws are based at isothermal conditions to a terminal velocity of 0.5m/s and 0.25m/s respectively, with a ceiling height of 2.7m. The diffuser is mounted flush in ceiling. Throw factors are for throws in one direction only. Noise ratings are based on a room absorption level of 10db.
